

Keep More of What You Make

Sheltering Solutions that
build business value and
personal wealth

by Mark C. Bronfman MBA, CPA* and Bob Gottschling, ChFC®, CMFC®, CRPS®

Business owners and executives understand the painful truth: taxes often eat up nearly 50% of their high-earner compensation. Once compensation is paid, a short list of deductions, losses, and credits are the only way to lessen the tax bite. This “*everyone for themselves*” approach to tax reduction has limited benefits.

There is a better way. Private companies can introduce solutions to shelter income before the compensation is recognized, thereby enabling the owners and executives to reduce taxes in three ways. Some sheltering solutions delay and defer taxes on compensation income. Some sheltering solutions reduce and/or eliminate taxes on investment earnings. And, some sheltering solutions convert ordinary income to capital gains.

Overall, a pivot to such solutions can deliver powerful benefits that:

- Provide owners with wealth-building opportunities
- Position the company as an employer of choice
- Nudge key executives towards financial freedom
- Improve company performance by reducing financial stress

In this report, we describe how sheltering solutions, such as qualified profit sharing plans, 162 bonus plans, and business succession LLCs fueled by profits interests, can be used to reduce the taxes on income, investment earnings, and capital transactions. Our aim is to assist owners and key executives in private companies in their quest to achieve financial freedom, win the war for talent, and create a value architecture for achieving short and long-term strategic objectives.

When it comes to compensation, it is not what you **make** but what you get to **keep** that matters.

Wealth Building · Financial Freedom · Low Friction Succession

The Hidden Opportunities in Cash-Based Compensation

Nobody enjoys paying taxes. Perhaps that's why the valuable opportunities hidden in the taxes owners and key employees in private companies incur on cash-based compensation are rarely fully recognized and exploited.

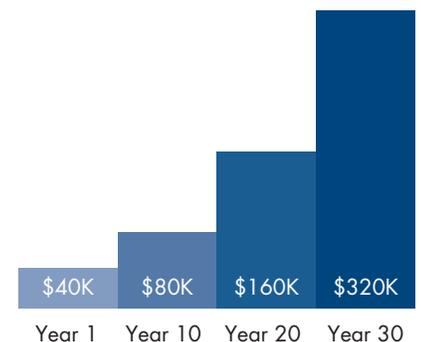

Company-based sheltering solutions are the key to unlocking these opportunities. These are solutions that substantially lower the taxes on: personal income, typically salary and bonus; investment income, such as interest, dividends, and capital gains; and equity transactions, via direct or simulated ownership in private companies. Sheltering solutions help build the personal wealth of key stakeholders, including owners and executives, and enhance the stability and performance of the company itself.

Taxation takes a huge bite out of owner and executive compensation. The federal income tax on cash compensation is nearly 40 cents on the dollar. Owners and executives who earn \$100,000 lose \$40,000 to taxes, leaving only \$60,000 for savings and investment. This tax bite has long-term consequences. If the \$40,000 tax could be deferred and invested at 7 percent, it would double within 10 years to \$80,000. It would double again to \$160,000 in 20 years, and again to \$320,000 in 30 years. Talk about opportunity cost!

Sheltering solutions help private companies win the war for talent, and drive business performance and results. They bind owners and executives to the company by providing them with the means to build long-term financial security and wealth. Sheltering solutions tangibly demonstrate an employer's commitment to its employees — fostering employee loyalty and high-performing organizational cultures.

Sheltering solutions enhance the performance of key talent by reducing their stress levels. Fidelity Investments survey discovered that only 20 percent of employees earning \$100,000+ are confident in their financial situation—this suggests that the performance of as many as eight in every 10 key employees could be negatively affected by financial stress.¹

Opportunity Cost:
upfront tax payment

Sheltering solutions bind owners and executives to the company by providing them with the means to build long-term financial security and wealth.

Sheltering solutions help key employees keep more of their pay and grow their net worth. It is counterintuitive and often surprising to employers that the financial futures of their key executives are not assured. After all, these executives typically are well paid and enjoy valuable benefits packages. But the reality is higher pay almost always translates into higher spending, not higher savings. PwC's 2017 Employee Financial Wellness survey revealed that 58 percent of employees earning \$100,000+ consistently carry credit card balances, and that 33 percent of them find it difficult to make the minimum payments.² When implemented properly, sheltering solutions will *nudge* key employees toward long-term financial wellbeing (see sidebar).

Sheltering solutions help owners preserve the fruits of their labor when they leave their companies. They protect the proceeds of capital transactions, so that owners can afford to sell when the right times arrives. They secure the business, personal, and philanthropic goals of owners. And they maximize the rewards that owners work so hard to earn.

The powerful effect of a *sheltering solution nudge*

Nudges are cues embedded in the design of a tax reduction program that direct human behavior without dictating it. The concept, which was popularized by behavioral economist Richard Thaler (The 2017 winner of Nobel Prize for Economics) and legal scholar Cass Sunstein, can have astonishingly powerful effects.³

Thaler applied the theory of nudging to retirement savings. He and economist Shlomo Benartz proposed a prescriptive savings program, called The Save More Tomorrow (SMarT) program, in which employees voluntarily commit to saving a portion of their pay—not immediately, but in the future when they receive a raise.

In 2004, the economists tested this idea through four pay raises in three different companies, and found that 78 percent of employees joined the program, 80 percent stayed in it through all four pay raises, and their average saving rates increased from 3.5 percent to 13.6 percent over the course of 40 months.⁴ Since then, thousands of employers have adopted SMarT and the plan has more than tripled the employee saving rates in some firms.⁵

When properly designed, sheltering solutions can provide powerful wealth-building nudges in and of themselves. In 2010, the Employee Benefit Research Institute found that employees earning \$100,000+ with individual account retirement plans had a median net worth of \$648,100. The median net worth of employees earning \$100,000+ without such plans? Only \$237,100.⁶

Selected Strategies to Keep More of What You Make

Outcome 1 Outcome 2 Outcome 3

Annual Limits (2017)	Shelter Income	Shelter Investment Earnings	Shelter Capital Transactions
----------------------	----------------	-----------------------------	------------------------------

Qualified Cash Plans

401(k) Plan	\$18,000	●	●	
Qualified Profit Sharing Plan	\$54,000	●	●	
401(k) ROTH	\$18,000		●	
Health Savings Accounts	\$7,200 (family)	●	●	
ESOP (a)	\$54,000	●	●	●

Nonqualified Cash Plans

Nonqualified deferred compensation	Nearly unlimited	●	●	
162 Bonus	Nearly unlimited		●	
Incentive Bonus Plan	Nearly unlimited	●	● (limited time period)	
Cascaded bonus plan	Nearly unlimited	●	● (limited time period)	

Equity-Based Plans

Profits Interest	Nearly unlimited			●
Incentive Stock Options	Nearly unlimited (b)		●	●
Business Continuity LLC	Nearly unlimited			●
Synthetic Equity including a 20% tax true-up	Nearly unlimited	●	●	●

Legend:

(a) ESOP straddle qualified plans and equity based plans, and are included as qualified plans for simplicity.

(b) The exercise of incentive stock options limited to \$100,000 per year. Beyond that they are treated as nonqualified stock options with a different tax treatment.

Source: Authors

Tax-qualified cash plans

These plans are “qualified” in that the company takes a tax deduction on plan contributions (deferral, match, bonus) before employees recognize taxable income. Generally, no tax due on plan balances until employee is paid out. These plans permit long-term tax deferral after separation via transfer to self-directed IRAs or other qualified plans. These plans are generally insulated from the creditor risk from the underlying company.

Nonqualified cash plans

These plans are “nonqualified” in that the company is not permitted to take a tax deduction on plan contributions (deferral, match, bonus) until the participant recognizes taxable income. Generally, no tax due on plan balances until the participant is paid out. These plans must be paid out in compensation (no transfer to self-directed IRAs). Further, these plans are subject claims of creditors in event of corporate insolvency.

Equity-based plans

These are compensatory arrangements, both qualified and nonqualified, tied to value of the underlying company. Some equity plans, such as ESOPs and incentive stock options, are bound by detailed tax rules that provide preferential tax treatment. Synthetic equity is an equity-based plan increasingly popular in private companies that requires no buy-in from the key executive and is taxed as compensation when eventually paid.⁷

Three Sheltering Solutions for Tax Reduction

Sheltering solutions can reduce taxes in three ways: they can reduce the tax on income; they can reduce the tax on investment earnings; and they can reduce the tax on capital transactions, including succession. (See the table above.)

Choosing the most beneficial sheltering solutions for a company is a function of which of the above three outcomes (or combination of outcomes) best fit the needs of its owners and key employees. For instance, a company heading toward leadership and capital succession in the near term will have very different needs than a firm that expects to maintain private ownership through several generations of management.

Outcome 1: Sheltering Income

Income-sheltering solutions enable employees to defer income taxes on balances until they access and use the funds, ideally at retirement.

These solutions are particularly useful for sheltering bonuses, because executives often live on their salaries and save their bonuses. Further, bonuses are often paid early in the year which can push the federal tax bite to 45 percent or more, including the full allocation of FICA.⁸

A qualified profit-sharing plan (Q-PSP) is a highly effective income-sheltering solution for bonuses. In a Q-PSP, the company chooses the size and scope of its annual contribution up to the plan limits of \$54,000 per eligible employee.⁹ For greater customization, a cross-tested Q-PSP can be used, in which, depending on the design, key executives can choose individually how much of the contribution will go into the Q-PSP.

Q-PSPs can deliver tax savings of 30-40 percent. Instead of paying the taxes on a bonus in full and immediately, employees only pay tax upon withdrawals of the funds (starting no later than the year the participant reaches age 70.5, the trigger for required minimum distributions). In the meantime, these plans usually provide participants with the ability to direct their investment balances. Eventually, the funds can be transferred into a self-directed IRA, and the tax savings can continue on the majority of the balance for decades. When executives withdraw the funds after retirement, their total tax on the initial bonus can be materially reduced, assuming they are in a lower tax bracket at the time of distribution.

Owners can use most of these solutions to lower their own taxes, subject to rules that vary by business entity. Typically, the owners of C corporations enjoy the greatest flexibility with regards to qualified plans; S corporation owners holding a 2 percent stake have some restrictions, and LLC owners, who are deemed to be self-employed, have the least flexibility.

Outcome 2: Sheltering Investment Earnings

Investment-sheltering solutions, such as a ROTH 401(k) and the 162 Bonus Plan, allow key employees to enjoy the exceptional benefit of tax-free growth on compensation after the initial taxation. With these solutions, tax is paid by the participant up-front and then, subsequent growth is tax-deferred, or possibly tax exempt.

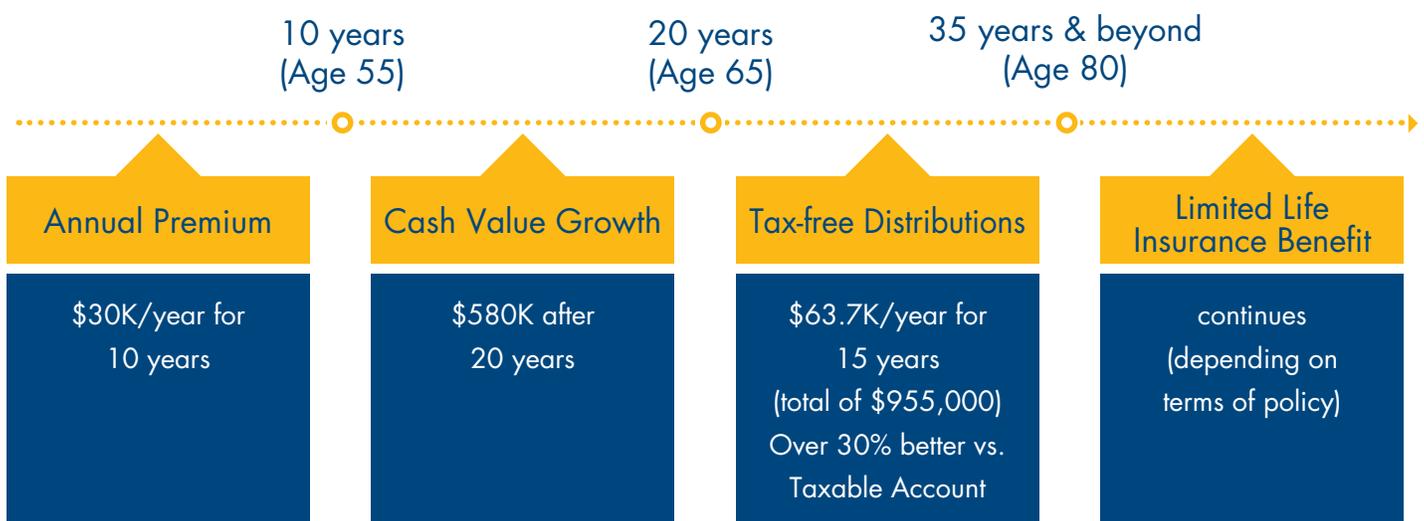

Named for the section of the IRS tax code that enables it, a 162 Bonus Plan is a particularly effective investment-sheltering solution that is built on a life insurance platform. The cash value of the life insurance policy can grow tax free or on a tax-advantaged basis, maximizing the power of compounded growth for decades. Companies can pay compensation, such as bonuses or a matching contribution to an executive's deferral, directly into these permanent policies as a premium.

It's the combination of life insurance, tax-advantaged earnings, company match, and withdrawal flexibility that makes a 162 Bonus Plan so powerful. Take, for example, a 46-year-old executive with after-tax deferrals and company matches that add up to a \$30,000 annual premium for 10 years. Let the compounding continue for another 10 years and the policy accumulates a cash value of \$580,000 by age 65 (assuming a 6 percent annual return). This executive could take annual tax-free withdrawals of about \$63,700 from the policy for 15 years until age 79 and still have the remaining paid-up life insurance coverage for years to come. The total tax-free distributions of \$955,000 has been shown to be over 30% better than distributions from a taxable investment account with comparable assumptions.

With these solutions, tax is paid by the participant up-front and then, subsequent growth is tax-deferred, or possibly tax exempt.

Power of Tax Deferral via of an 162 Bonus Plan

Hypothetical Illustration: 46-year-old, assumes standard underwriting using a common Index Universal Life Product.

* Life insurance policy assumes an average 6% annual investment performance (depending on terms of policy).

Outcome 3: Sheltering Capital Transactions

Sheltering solutions for capital transactions address issues with which all owners of private companies struggle—leadership and capital succession. All private companies need a value architecture that defines how leaders become owners, how they share in the value they help create along the way, and how they exit ownership in style. In addition, private companies must be prepared for the incapacity or death of founders and owners, which can trigger major leadership and financial disruptions with draconian tax consequences. Sheltering solutions for capital transactions, such as profits interests, synthetic equity, and incentive stock options, can dramatically reduce the tax friction that occurs when new owners enter and existing owners exit the enterprise.

VALUE ARCHITECTURE

The strategic blueprint governing how owners and key executives

- Enter
- Share Value
- Eventually Exit the Enterprise

with the goal of promoting growth and succession.

Take the common example of a founder who wants her business to continue under its current leadership team in the event of her disability or death. The founder could leave capital in the underlying company to enable succession, but that traps the capital in the owner's estate, making it unavailable to the succession team. Alternatively, the founder could acquire a life insurance policy with death benefits going to the company, but the payout can raise the value of the company, which adds to the estate tax burden and the price of a leadership buyout. Finally, the founder could award bonuses to the succession executives to enable the buyout, but that is cash compensation and triggers ordinary income taxes. What can the founder do?

Will Hidden Taxes Derail Your Succession Plan?

The tax bite of a traditional management buyout (MBO) can threaten capital succession - leaving a forced sale or liquidation as the default succession pathway.

Consider a common plan. A founder sets up a stock appreciation rights (SARs) plan to get capital to key executives to enable the management buyout strategy.

Follow the taxes for a company making \$10M per year in earnings before taxes:

- The company pays 40% ordinary income taxes on profits.
- Then the executives owe 40% ordinary income taxes on the payout of the SARs plan.
- Then the owner owes 20% capital gain taxes on the proceeds from the MBO.

The result: the IRS gets the large majority of the value from the succession plan and the owner ends up with pennies or dimes on the dollar.

Addressing this succession plan upfront can dramatically reduce taxes on capital transfer.

One powerful sheltering solution the founder can turn to is an executive compensation LLC (also called a business continuation LLC). In this solution, a separate entity is established to hold the upside value of the company, which eases the process of leadership and capital succession. The upside can be delivered via profits interests, which transfer upside value in a new LLC without triggering any tax at grant. Furthermore, the value of profits interests at liquidation is taxed at the favorable capital gains rate.¹⁰ Alternatively, the upside can be delivered via a capital infusion derived from life insurance death benefits or disability benefits that are paid to the succession LLC.

A business continuity LLC can be an extremely effective means of value transfer. It can reduce tax by 80 percent or more compared to bonusing value directly to succession executives as compensation. It provides key executives with a welcome degree of control over their futures by establishing a unified leadership and capital succession solution. It conveys a sense of loyalty to the executives and earns their loyalty in return. And it is highly flexible—enabling the founder to reallocate units if and when the leadership roster of the organization changes.¹¹

Purpose First!

The ultimate paradox of business is that growth enables scale, but it also triggers complexity, which defeats scale. Ensuring that sheltering solutions work together in a harmonious way is not only good financial hygiene, it also is enormously important to business success. Working with a strong advisory team helps map sheltering solutions to the growing company.

When private companies consider sheltering solutions, we always seek to direct their focus to first achieving maximum purpose, not simply maximum gain. The goal is to select and shape a set of sheltering solutions into a coherent tax reduction strategy that fulfills business and personal needs.

Private companies should create a sheltering strategy that addresses and optimizes returns for three primary internal stakeholders: owners, key executives, and the company itself. To achieve this, we typically begin by seeking to understand the “value gap,” that is, the difference in value between what an owner needs to retire and current resources. Then, we seek to enlist and embed the power of nudges to help key executives attain their long-term financial goals. Finally, we seek to fit the sheltering strategy within a resilient value architecture, which articulates how owners and executives will enter, share value, and eventually leave the company via tax advantaged **Sell·Pay·Convey**[®] solutions.¹²

Sheltering solutions are powerful tools, indeed. Be sure your company is taking full advantage of them.

Top 40 Executive Rewards*: A Pathway to Strategic Advantage

Equity Based Incentives

True Equity: Full Value

- 1) Sell Stock to key managers
- 2) Compensatory stock grants
- 3) Owner Redemption (Gross up others)
- 4) Restricted Stock and RSUs
- 5) ESOP (leveraged or creeping ESOP)
- 6) Ramp-down/Ramp-up (new entity)
- 7) Restricted stock paid at CinC **

True Equity: Upside Value

- 8) Profits Interest in LLC
- 9) Drop Down Division (w/upside interest)
- 10) Employee Stock Options ("Options")
- 11) Stock Appreciation Rights (SARs)
- 12) Hybrid Capital/Profits Interests
- 13) Out of the Money SARs, Options
- 14) Options/SARs paid only if CinC

Synthetic Equity (Full or Upside)

- 15) Phantom Stock (enterprise or division)
- 16) Phantom Stock with Owner's Pref
- 17) Enterprise Value Unit Plan
- 18) Graduating Value Band Unit Plan
- 19) Liability SARs
- 20) Performance Shares
- 21) Sales Bonus upon CinC

Cash Based Incentives

LT Performance Cash

- 22) Allocable Profit Sharing
- 23) Profit Appreciation Rights
- 24) Book appreciation rights (BARs)
- 25) Deferred Participation Units
- 26) Discretionary LTIP Plans
- 27) Cash bonus paid at CinC

Deferred Cash

- 28) Discretionary Bonus(group/Individual)
- 29) NQDC Plan (w/ comp match)
- 30) Qualified Profit Sharing Bonus
- 31) Defined Benefit Plans
- 32) Incentive Bonus Plan
- 33) Split Dollar Insurance (or 162 Bonus)
- 34) CinC payouts as multiple of salary

Immediate Cash

- 35) Salary increases
- 36) Annual Bonus
- 37) Sales Commission Programs
- 38) Spot Bonuses
- 39) Fringe Benefit
- 40) Lifestyle Incentives

* Incentives ranked from "Value Now" to "Value Later" (Value Now near top of each of six lists).

** "CinC" refers to Change in Control
